MiFID II: Costs and Charges

1. Introduction

This document sets out information concerning costs and charges that we are required to disclose to you by article 24(4) of the Markets in Financial Instruments Directive 2014/65/EU (**MIFID II**). The obligation to disclose this information relates to services or activities provided to you by Commonwealth Bank of Australia, London Branch (**CBA LB**) and/or CBA Europe Limited (**CBAE**) (together, '**we**,' '**us**,' '**our**') in accordance with the Terms of Business we currently have in place with you. It applies to transactions we may enter into with you in the following Financial Instruments (as defined in MiFID II):

- Bonds
- Foreign exchange derivatives
- Commodity derivatives
- Interest rate derivatives
- Credit derivatives

Where we provide any specific information on costs and charges prior to entering into a transaction with you (for example by means of a term sheet or other oral or written disclosure) that information will take precedence over the information set out in this document.

2. Application of costs and charges

You may incur costs and charges when entering into transactions for the acquisition or disposal of a Financial Instrument with us ("**Transaction Costs**"). Transaction Costs are included in the all-in price that we quote to you and are equal to the difference between the all-in price and the fair market value of the instrument.

The fair market value will be either the prevailing mid-market price (where this is available or can be readily derived) or the price at which we would expect to trade with interbank counterparties. In general and where possible, Transaction Costs will be calculated with reference to the mid-market except for commodity derivatives. However, this can vary depending on availability of suitable reference pricing.

Transaction Costs include amounts to compensate the bank for items such as, but not limited to, the risk associated with providing trade execution in the market, the volatility and liquidity of the instrument you are trading, size and/or complexity of your transaction, ongoing services provided to you, balance sheet and capital usage, risk limit usage, counterparty specific risk costs, and our operational costs including processing and settlement costs of the transaction.

Transaction Costs may also be incurred during the lifecycle of a transaction where this involves a pricing or other related event. For example, in the event of exit or termination of the transaction.

In order to determine the Transaction Cost, we will determine the fair market value in our sole and absolute discretion, and will do so by reference to prevailing executable bid-offer prices (where this is available), observable transaction prices, observable market inputs or reasonable estimates depending on the availability of such data.

Third party payments received by the investment firm

We do not receive third party payments when executing transactions in Financial Instruments with you. Should we receive any third party payments then these will be disclosed in accordance with our regulatory obligations.

Cumulative effect of costs and charges on returns

Your Transaction Costs in respect of a transaction will be based on the all-in price we quote to you. The overall return on investment that you could expect to receive over the life of the transaction will be reduced by the aggregate amount of these Transaction Costs. While the amount of your Transaction Costs will be determined upfront, when you incur these costs will depend on the terms and conditions and the payment structure of the transaction.

3. Costs and Charges – Ex-ante Disclosure

The costs and charges figures displayed in this section have been prepared based on reasonable estimations and assumptions using historical costs and charges data that was available for Financial Instruments transacted over a six-month period between June 2017 to December 2017. For the Financial Instruments with limited trade activity during this period, the figures reflect CBA's estimate of the costs and charges for transactions under specific market conditions transacted at that time. The figures are provided only for Financial Instruments and key tenors that were commonly traded during this period (as relevant for purposes of this MiFID II costs and charges pre-trade disclosure).

The costs and charges are calculated as the difference between the all-in price we quote to you and the fair market value of a Financial Instrument. In general and where possible, we have used the market-mid price as the base price for the calculation of the fair market value of a Financial Instrument. In some cases where the market-mid price was not readily available, we have had to use CBA's internal determination of a mid-price. However, for commodity derivatives, the actual trader price has been used, as we consider that the trader price more accurately reflects the fair market value of the types of Financial Instruments that CBA typically transacts in. The trader price will vary from trade to trade based on observable prices in the market, liquidity, volatility, ongoing market making activities and the specific nature of the transaction.

The figures are provided to you solely for illustrative purposes of the costs and charges associated with the particular Financial Instruments disclosed herein. They may not reflect the costs and charges that would actually be incurred for a Financial Instrument that CBA transacts with you. The figures have been calculated based on reasonable assumptions, including rounding values where it has been deemed appropriate. CBA will periodically review the estimated figures shown in the table and make adjustments where necessary.

Asset class cost and charges					
<u>Bonds</u>					
High grade & SSA					
Time to Maturity	0-2 Years	2-5 Years	5-9 Years	9-12 Years	12 Years or greater
	Average yield spread to mid (bps)	Average yield spread to mid (bps)	Average yield spread to mid (bps)	Average yield spread to mid (bps)	Average yield spread to mid (bps)

Notional representation:

1. If you are trading an Australian government bond with a face value of AUD 100mIn and 7 years remaining maturity the estimated costs and charges from mid is 0.003% per annum. This results in total estimated life-time costs of AUD 21,000 (AUD 100mIn x 0.003% x 7 years)
2. If you are trading an investment grade credit bond with a face value of USD 10mIn and 5 years remaining maturity the estimated costs and charges from mid is 9.6 cents which results in total costs of USD 9,600 (USD 10mIn x 0.096%)
3. If you are an investment grade client trading a fixed floating Interest Rates Swaps with a non-amortizing notional of AUD 10mIn and a 6 year maturity, the estimated costs and charges from mid would be 0.031%. This results in a total estimated lifetime cost of AUD 18,600 (AUD 10mIn x 0.031% x 6 years). Note that costs may be higher if the trade is not collateralized and lower for collateralized trades
4. If you are an investment grade client trading a commodity swap with a notional of AUD 1mIn and 2 years maturity (e.g. 10,000 barrels of Brent crude oil with a price of AUD 100 per barrel) the estimated costs and charges from the trader price would be 0.30%-0.40%. This results in a cost and charge of AUD 3,000 – 4,000. Note that costs tends to be higher for uncollateralized trades than for collateralized trades and depends on the client's credit quality.
5. If you are an investment grade client trading a metals commodity swap with a notional of USD 2.3mIn and 2.5 years maturity (e.g. 1,000 metric tonnes of aluminium with a price of USD 2,300 per metric tonne) the estimated costs and charges from the trader price would be 0.45-0.70%. This results in a cost and charge of AUD 10,350 – 16,100. Note that costs tends to be higher for uncollateralized trades than for collateralized trades and depends on the client's credit quality.
6. If you are an investment grade client trading an outright AUD/USD FX forward with maturity of 4 years in USD 10mIn the costs and charges from mid would be 0.0773% which results in total costs of USD 7,730. Note that costs may be higher if the trade is not collateralized and lower for collateralized trades.
7. If you are an investment grade client trading a EUR/USD FX swaps with maturity of 9 months in EUR 100mIn the estimated costs and charges from mid would be 0.0055% which results in total costs of EUR 5,500. Note that costs may be higher if the trade is not collateralized and lower for collateralized trades.

Important Note

This information is provided to you by us for illustrative purposes and in order to satisfy our legal obligations and regulatory disclosure requirements and does not relate to any services or activities provided to you by any other CBA group entity and/or branch. This document does not constitute marketing material nor should it be considered by you as a recommendation, solicitation or offer to purchase or sell a Financial Instrument. The provision of this document to you does not constitute us providing you with any investment advice. If you enter into a transaction with us, our relationship will be governed by our Terms of Business and the terms of the transaction will be agreed between us and set out in the relevant Product Agreement (as defined in our Terms of Business)
