## Lifestage 1955-59 option fact sheet

31 March 2021

### About Lifestage options

As you move through life, your investment needs, financial situation and attitude to risk change. Our Lifestage option provides investments that change as you get older. For each life stage we'll select an investment mix that reflects the typical needs for people at that stage of life. And as you move from one life stage to the next, we'll adjust the investments accordingly.

### Investment objective

To achieve a return of CPI plus 1.0% per annum over rolling three-year periods after fees and taxes.

### Investment strategy

To invest in a diverse range of assets that are expected to generate a mix of income and long-term capital growth with an emphasis on stable returns. The option may use derivatives with the objective of reducing overall portfolio volatility. The portfolio aims to hedge currency risk except for part of the allocation to global shares (which may include emerging market shares).

### Minimum suggested timeframe

At least 3 years

### Risk rating

Band 5 - Medium to High

The level of investment risk is the Trustee's estimate of the risk of negative returns over a 20 year period. It is not a complete assessment of all forms of investment risk. For more information about risk, refer to the Reference guide.
